\* All data based on XML code:

**Build wonders** refers to World Wonders (scale: extreme, very often, often, sometimes, rarely, very rarely, never);

**Trains units** refers to military unit training probability at peace (scale: extreme, very often, often, moderate, sometimes, rarely);

**Aggression level** refers to war planing probability (scale: very high, high, medium, low, quite low, very low);

**Espionage level** refers to espionage activity (scale: extreme, very high, high, intensive, normal, medium, moderate, low, very low, minimal);

**Tech trading** refers to technology trading behaviour (scale: very averse – requires higher AI attitude, averse, moderate, willing), percentages refer to known technologies AI would want to trade (average);

**Base peace weight** (scale: 0 – most warlike, 10 – most peaceful);

**Peace probability** (percentages are for Annoyed / Cautious / Pleased / Friendly relations. Each round, every AI will run a Declaration of War check against every other civilization. This check involves an evaluation of relative military strengths, defensive pacts, logistical considerations (shared borders, ocean crossings), existing conflicts, etc. The Peace Probability percentages above indicate the likelihood that an AI will ignore a decision to declare war due to diplomatic factors. Note: While a decision to go to war is immediate, the actual declaration may take a dozen turns or more);

 <b>Work Boat</b>	30	0 / 2 MP	Fishing	cannot enter neutral Ocean tiles until Astronomy can create Fishing Boats, Whaling Boats and Offshore Platform
 <b>Worker</b>	60 with food	0 / 2 MP	—	can build tile improvements +25% production speed for Expansive Leaders (hammers only)

MP movement points R operational range

\* Assumes Normal Game Speed. Factors for other conditions are: Quick ×0.67, Epic ×1.50, Marathon ×3.00 (!)  
example: Longbowman on Epic will cost 75 hammers instead of 50

\*\* number depends on map size \*\*\* bonus depends on map size and game length

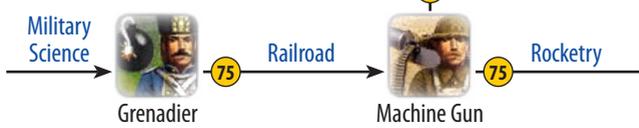

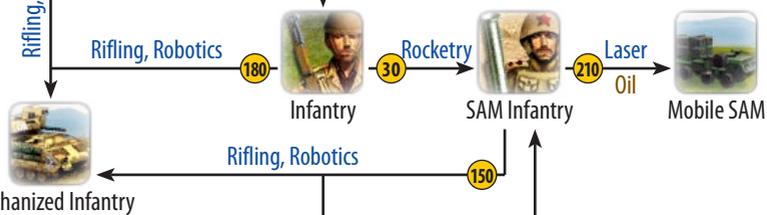

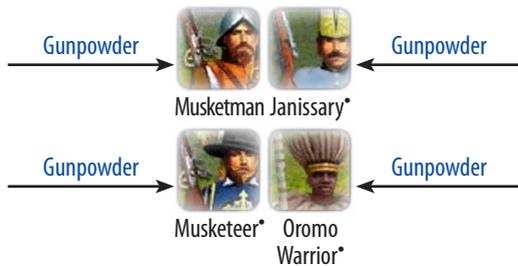

**60** Upgrade cost (gold). Assumes **Normal** Game Speed. Factors for other conditions are: **Quick** × 0.67, **Epic** × 1.50, **Marathon** × 2.00. For calculating long-path upgrades just add all specified values. Also, at the end of calculations **you must add an additional upgrade cost which is 20 gold per unit** (all Game Speeds).  
*Example 1:* Upgrading 2 Warriors to 2 Spearmans on Epic cost 220 gold – 2 units × (20 + (60 × 1.50)) = 2 units × 110 = 220.  
*Example 2:* Upgrading 3 Horse Archers to 3 Cuirassiers on Marathon cost 960 gold – 3 units × (20 + ((120 + 30) × 2.00)) = 960.
